## **TATTOO AFTERCARE INSTRUCTIONS**

Now, you have your fresh new tattoo, and you want to take good care of it! From this point on, your artist is not responsible for any infection or problems you may have with your tattoo if you don't take proper care of it. It is very important that you follow these guidelines. A really beautiful tattoo can turn into a disaster if the proper aftercare is not taken.

### **Wash and Treat**

Remove bandage after 3 hours, and wash your tattoo. Use lukewarm water and mild, liquid antibacterial or antimicrobial soap to gently wash away any ointment, blood and/or plasma and to completely clean the area. Do not use a washcloth or anything abrasive. Your hand is your best tool in this case. (If your tattoo feels slimy and slippery, you have probably been oozing plasma. Try to gently remove as much of this as possible - when the plasma dries on the skin surface, it creates scabs.)

Then pat (do not rub) the area firmly with a CLEAN paper towel to get it completely dry. Follow with a very light application of ointment Bacitracin 3 times a day for 2 days only. This is a wonderful product for cuts and scrapes, but not for tattoos. Some can have an allergic reaction to the Neosporin, which causes little red bumps. When the bumps go away, so does the ink, and you end up with a polka-dotted tattoo

After that, continue to keep it clean, but you use lotion instead of ointment, to keep the skin soft. Whatever lotion you use, it should be dye and fragrance free. I recommend Aveeno with the Army Green Top. Lubriderm, is also a good one to use.

### **Bathing, Showering, Hot Tubs, and Swimming**

Yes, you can (and should!) shower with a new tattoo. It's OK to get your tattoo wet -just don't soak it. Submerging your tattoo in a bath or hot tub can cause serious damage, so you'll want to avoid those for 2-3 weeks, but showering is perfectly fine as long as you don't saturate your tattoo. If you get soap or shampoo on your tattoo, just remove it quickly with water. Swimming - whether it be a pool, fresh water or salt water -should be avoided for at least 2 weeks.

### **Scabbing and Peeling**

After a few days, you will notice some peeling and possibly a little scabbing. Excessive scabbing could indicate a poorly-done tattoo, but a little is sometimes normal and there is no need to panic. Apply warm moist compresses to the scabs for about 5 minutes 2-3 times a day to soften them and they will eventually come off on their own. (Do not apply ointment or lotion to a softened scab - wait for it to dry) You will also start to itch, just like a sunburn when it begins to heal. The advice here is, don't pick, and don't scratch! If the skin itches, slap it. If it is peeling, put lotion on it. And if it is scabbing, just leave it alone. Your tattoo is almost healed, and now is not the time to ruin it!

### **Protection From The Sun**

After your tattoo is healed, from now on, you will always want to protect it from the sun's ultraviolet rays. These can fade and damage a brilliant tattoo very fast. Before spending a lot of time in excessive heat, protect your tattoo with a minimum 30SPF sunblock. This will keep your tattoo vibrant for many years, and it will continue to be a source of great pride.
